SACHIN RATHOD

Cloud & DevOps Engineer

Beed, Maharashtra | +91-9359523723 | sachin-rathod@outlook.com | linkedin.com/in/sachin-rathod-4a3737239 | github.com/sachin-rathod-tech

PROFESSIONAL SUMMARY

DevOps Engineer with strong, hands-on foundations in Linux administration and AWS cloud infrastructure, plus practical experience across Docker, Kubernetes (EKS), Terraform, and Jenkins CI/CD pipelines with security scanning (SonarQube, Trivy) and GitOps deployment (ArgoCD). Comfortable working across the full deployment lifecycle — from provisioning infrastructure as code to containerizing applications, orchestrating them on Kubernetes, and monitoring them in production with CloudWatch and Datadog. Immediate joiner.

CORE TECHNICAL SKILLS

- **Linux Administration:** User/group management, permissions (chmod, chown, chgrp), sudoers configuration, process management, Bash scripting, Cron scheduling, package management (apt, yum), Vim/Nano
- **AWS Cloud:** EC2, VPC (subnets, route tables, NAT Gateway, peering), S3 (lifecycle, versioning, replication, static hosting), RDS & Aurora, Route 53 (routing policies), CloudFront, Lambda, IAM, Auto Scaling, Elastic Load Balancing (ALB/NLB/CLB), EBS/EFS, CloudWatch
- **Containers & Orchestration:** Docker, Docker Compose, Kubernetes (EKS) — Deployments, StatefulSets, DaemonSets, Ingress, HPA/VPA, ConfigMaps & Secrets
- **Infrastructure as Code:** Terraform (modules, variables, workspaces, remote state/backend)
- **CI/CD & DevSecOps:** Jenkins (Groovy pipelines), GitHub Actions, Maven, SonarQube, Trivy, ArgoCD (GitOps)
- **Monitoring & Observability:** AWS CloudWatch, Datadog
- **Version Control:** Git, GitHub, GitLab
- **Currently Learning:** Microsoft Azure, Google Cloud Platform (GCP), Python

INTERNSHIP EXPERIENCE

DevOps Engineer Trainee — Cloudblitz Pvt. Ltd., Nashik *2026*

- Automated AWS cloud infrastructure (VPC, Subnets, EC2, S3, RDS, IAM) using Terraform IaC, reducing provisioning time by 40%.
- Built and optimized end-to-end CI/CD pipelines using Jenkins and GitHub Actions with SonarQube quality gates.
- Containerized microservices using Docker, published images to Docker Hub and ECR, and managed Kubernetes deployments on EKS with HPA autoscaling for 99.5% uptime.
- Administered Linux (Ubuntu) servers, implemented UFW firewall rules, and automated routine system tasks using Bash scripts and Cron jobs.
- Configured real-time system monitoring and alert dashboards using Prometheus, Grafana, and AWS CloudWatch.

KEY ACHIEVEMENTS

- Reduced AWS infrastructure provisioning time by 40% by automating environment setup with Terraform IaC.
- Maintained 99.5% uptime for Kubernetes workloads on EKS through Horizontal Pod Autoscaling (HPA).
- Debugged and resolved recurring Jenkins CI/CD pipeline failures (webhook config, SonarQube quality gate, build tool issues), stabilizing pipelines to consistent passing builds.

TECHNICAL PROJECTS

Netflix Clone — CI/CD Pipeline with Security Scanning *Jenkins, Maven, SonarQube, Trivy, Docker*

- Built a Jenkins (Groovy) pipeline integrating Maven build, SonarQube code-quality gates, and Trivy vulnerability scanning for a containerized application.
- Configured automated Docker image builds and deployments as part of the CI/CD workflow.

GitHub: https://github.com/sachin-rathod-tech/Project-Netflix-Clone

Myntra Clone — GitOps Deployment with ArgoCD *Jenkins, Kubernetes, ArgoCD, AWS CLI*

- Set up a Jenkins CI pipeline feeding a GitOps-based CD workflow using ArgoCD for Kubernetes deployments.
- Configured AWS CLI and kubectl integration for automated cluster deployments.

GitHub: https://github.com/sachin-rathod-tech/Project-Myntra-Clone

EasyCRUD — 3-Tier Web Application *AWS RDS/Aurora (MySQL), Java, Docker*

- Designed a 3-tier application connecting a Java backend and frontend to an Aurora/RDS MySQL database.
- Created and managed databases and tables, and handled backend-to-database connectivity.

GitHub: https://github.com/cloud-blitz/EasyCRUD

Automated Game Deployment on AWS *AWS, Terraform, Docker, Shell Scripting*

- Provisioned AWS EC2 instances and security groups using Terraform IaC, with an automated S3 remote backend and DynamoDB state locking.
- Automated runtime package setup and Docker container execution via EC2 user-data bootstrapping scripts.
